

PRESS RELEASE

Tuesday, November 24, 2009

Inter-Citic Releases Third Set Of Drill Hole Results From Dachang Gold Project.

20 of 22 Drill Holes report Gold Mineralization.

November 24, 2009, Toronto, ON: Inter-Citic Minerals Inc. (TSX-ICI) (“Inter-Citic” or “the Company”) President and CEO James Moore, is pleased to report new results received from the Company’s 2009 diamond drill program at its Dachang Gold Project in China.

“Our 2009 infill drill program at Dachang continues to show remarkable consistency,” said James Moore, President and CEO of Inter-Citic. “While results of our infill program will continue to be reported, we are now concentrating on drilling new areas of discovery.”

Drilling results highlights include:

- Drill hole CJV-737 is an infill drill hole on the Dachang Main Zone (“DMZ”), and intersected multiple mineralized zones, including 17.30 metres of mineralization averaging 2.62 GPT contained gold.
- Drill hole CJV-742 is an infill drill hole on the DMZ, and intersected multiple mineralized zones, including 10.40 metres of mineralization averaging 4.49 GPT contained gold.
- Drill hole CJV-746 is an infill drill hole on the DMZ, and intersected a mineralized zone of 8.80 metres of mineralization averaging 8.26 GPT contained gold.
- Drill hole CJV-755 is a drill hole on the Place Valley Zone (PVZ), and intersected multiple mineralized zones, including 4.00 metres of mineralization averaging 5.73 GPT contained gold.
- Drill hole CJV-756 is a drill hole on the Place Valley Zone (PVZ), and intersected a mineralized zone of 7.80 metres of mineralization averaging 3.21 GPT contained gold.

Detailed drilling results are set out in the chart below:

DDH Hole No.	Zone	Section Line	Dip	Azimuth	From	To	Length	GPT Au
CJV-737	DMZ	2700	-50	20	39.60	40.60	1.00	1.88
					43.00	44.00	1.00	1.96
					66.70	67.70	1.00	2.21
					77.70	79.20	1.50	1.51
					81.70	99.00	17.30	2.62
CJV-738	DMZ	2325	-50	20	17.70	18.70	1.00	1.79
CJV-739	DMZ	6300	-85	20	<i>no significant assays</i>			
CJV-740	DMZ	2375	-50	20	20.20	27.70	7.50	3.02
					30.70	31.70	1.00	0.85
					33.70	36.00	2.30	0.55
					88.20	89.20	1.00	1.58
					92.20	93.20	1.00	1.64
CJV-741	DMZ	6500	-55	20	74.30	75.30	1.00	0.82
					120.00	122.00	2.00	3.00
					128.00	130.00	2.00	0.79
CJV-742	DMZ	2700	-80	20	53.70	66.90	13.20	1.63
					69.00	72.00	3.00	1.08
					75.70	81.20	5.50	2.10
					84.00	85.00	1.00	2.43
					92.90	93.90	1.00	1.80
					96.00	97.00	1.00	0.71
					107.50	108.50	1.00	0.84
					112.50	122.90	10.40	4.49
CJV-745	DMZ	9500	-45	20	15.20	16.20	1.00	1.02
					20.20	23.20	3.00	1.59
					25.70	26.70	1.00	3.53
CJV-746	DMZ	10700	-45	20	8.20	9.20	1.00	1.38
					27.90	36.70	8.80	8.26
CJV-747	DMZ	11300	-50	20	8.40	9.80	1.40	2.47
CJV-748	DMZ	1100	-50	20	19.30	20.30	1.00	2.59

CJV-750	DMZ	2700	-80	20	47.60	48.60	1.00	6.12
					96.70	101.00	4.30	1.24
					115.60	116.90	1.30	0.55
					122.10	124.30	2.20	2.26
					127.40	130.00	2.60	1.15
					136.40	137.40	1.00	4.10
CJV-751	DMZ	750	-50	20	44.20	45.20	1.00	0.58
					81.20	82.20	1.00	6.78
CJV-752	DMZ	6300	-55	20	7.00	8.00	1.00	0.72
					14.90	17.00	2.10	2.00
					32.70	34.10	1.40	0.82
CJV-753	DMZ	6100	-55	20	20.80	22.00	1.20	2.60
CJV-754	DMZ	750	-88	20	31.50	32.50	1.00	0.90
CJV-755	PVZ	2900	-55	20	37.40	38.40	1.00	0.99
					58.70	60.70	2.00	1.12
					65.00	69.00	4.00	5.73
CJV-756	PVZ	3300	-50	20	5.90	9.00	3.10	2.27
					12.50	20.30	7.80	3.21
CJV-757	DMZ	750	-50	20	<i>no significant assays</i>			
CJV-758	DMZ	6100	-70	20	82.00	84.00	2.00	3.18
					112.10	113.20	1.10	0.89
					116.20	117.40	1.20	0.90
					122.50	125.50	3.00	0.90
CJV-759	PVZ	3300	-50	20	53.60	54.60	1.00	1.17
CJV-760	PVZ	2900	-50	20	10.00	11.00	1.00	2.80
CJV-761	PVZ	3300	-50	20	6.80	20.00	13.20	1.64
					60.00	61.00	1.00	13.80

DMZ: Dachang Main Zone – A continuous approximately 4 km long zone of mineralization that includes the original 2km long zone of mineralization defined by the 2006 DDH program and the Dachang Main Zone Extension (originally called the DMZ-X) that extends off the eastern end of the DMZ as defined by the 2007 and 2008 DDH programs.

PVZ: Placer Valley Zone – A south dipping mineralized fault 1 km south of the DMZ.

Assay cut-off for the above table was at 0.5 gpt Au, however, intervals were determined by geological interpretation of consistent mineralized zones. Broader intervals may include waste intervals of up to 2m. There was no evidence of nugget effect and none were topcut. True widths for the intervals above have yet to be determined.

The Company is operating seven drill rigs at Dachang and further results from in-fill drilling as well as step-out exploration drilling will be reported as they are received and compiled.

Infill holes are testing continuity of the Company's existing NI 43-101-compliant inferred resource area on the total 4 km extent of the Dachang Main Zone. Infill drilling is also a required step towards applying for a Chinese mining permit.

A visual representation of the location of the drill holes in this release can be seen at: <http://www.corebox.net/properties/dachang/> or as a map on the Company's website. A location map showing drill hole locations is available on the Company's website at: <http://www.inter-citic.com/maps.htm>.

Sample Methodology:

Drill core samples were taken at geologically significant intervals, typically over one metre. Core recovery was approximately 90%. The designated sample intervals were cut with a diamond saw by qualified technicians. One half of the cut core was selected for assay with the remaining half being placed back into the core box. Care was taken to ensure that neither half of the core represents a bias with respect to the nature and mineral content of the sample. The sample interval and methodology are consistent with industry standards. Drill core samples were shipped to SGS Geochemical Laboratories ("SGS") located in Kunming and Tianjin, China for sample preparation and 50g fire assay with AA finish. SGS is the world's leading inspection, verification, testing and certification company. Analytical work is performed in accordance with recognized standards such as ASTM, ISO, JIS, and other accepted industry standards. Accuracy of the results is tested through the systematic inclusion of reference samples and duplicate samples.

Security of Samples: All of the samples collected at Dachang are stored in a restricted secure storage area. Samples are shipped by truck to Golmud and delivered to Inter-Citic's courier agent in Golmud for shipment to the various laboratories for analysis. Inter-Citic's courier agents are present at all transshipment points between Golmud and the laboratories. Exploration at Dachang was conducted with the assistance of the numerous professionals from the Qinghai Geological Survey Institute, working in co-operation with Inter-Citic's technical team on site and supervised by Mr. Garth Pierce, Vice-President of Exploration.

Mr. Gerald Bidwell, P.Geo., the Company's internal Qualified Person under the requirements of National Instrument 43-101, has reviewed the results reported in this press release.

Mr. B. Terrence Hennessey, P.Geo., of Micon International Limited is a Qualified Person under the requirements of National Instrument 43-101 and has reviewed a copy of this press release.

On Behalf of the Board:

"James J. Moore"
President & CEO

ABOUT INTER-CITIC:

Toronto-based Inter-Citic Minerals Inc. is an exploration and development company with property in the People's Republic of China, including its Dachang Gold Project in Qinghai Province. Inter-Citic is listed on the TSX under the symbol ICI. Inter-Citic's website is www.inter-citic.com.
