

## **PRESS RELEASE**

**Wednesday, September 6, 2006**

### **Inter-Citic Receives Results From 10 Drill Holes On Dachang East Area.**

**Results Include Shallow Drill Holes Containing 23.6 Metres of 7.9 Grams Per Tonne Gold and 22 Meters of 5.71 Grams Per Tonne Gold.**

**September 6, 2006, Toronto, ON:** Inter-Citic Minerals Inc. (TSX-ICI) (“Inter-Citic” or “the Company”) President and CEO James Moore, is pleased to report results received from the third set of drill holes from its 2006 diamond drill program at its Dachang Gold Project in China.

This news release provides results from 10 drill holes, all of which intersected gold mineralization, in the Dachang East area of the Company’s Dachang gold project. Maps of the Dachang East area illustrating drill hole locations are available on the Company’s web-site: [www.inter-citic.com](http://www.inter-citic.com).

#### **Highlights:**

- 66 drill holes now completed at the Dachang Gold Project in 2006;
- Approximately 10,000m of the Company’s 20,000m diamond drill program for 2006 has now been drilled, and the balance is on schedule to be completed by year end;
- With this release, 25 drill holes on Dachang Main Zone are now reported;
- 41 more drill holes on Dachang Main Zone are now complete and pending assay results, and will be reported as results are received;
- Mineralization in the Dachang Main Zone has now been mapped by detailed trenching (40 metre intervals) for a two and a half kilometre strike length, showing sulphide mineralization across widths of 7 to 23 metres, and remains open long strike. An updated Plan view map can be found on the Company’s website showing the location of the drill holes reported in this release;
- Majority of holes drilled on the Dachang Main Zone have been relatively shallow (typically less than 150m in depth), and are showing continuity of width; and,
- Drill core recovery has averaged in excess of 90%, with relatively poorer core recovery in steeply angled holes. The Company will begin using larger drill core (HQ) to improve future core recovery in the fault zone.

Detailed drilling results are set out in the chart below:

DDH Number	Hole location		Section	Dip / Azimuth	Hole Length Meters	Gold Assay (Grams per Tonne)	From	To	Drill Width
	Northing	Easting					Meters		
CJV-61	249076.6	3911491	14300	45 dip / 200°	84.4 m	2.76 gpt	15m	17m	2.0 m
						4.21 gpt	22m	29m	7.0 m
						7.91 gpt	64m	71m	7.0 m
CJV-62	249076.6	3911491	14300	72 dip / 200°	61.1 m	1.30 gpt	37m	39m	2.0 m
						4.75 gpt	51m	53m	2.0 m
CJV-63	249058.1	3911440	14300	45 dip / 020°	114.9 m	3.55 gpt	18m	26m	8.0 m
						3.07 gpt	40m	51m	11.0 m
CJV-64	249058.1	3911440	14300	67 dip / 020°	124.1 m	1.65 gpt	54m	62m	8.0 m
CJV-65	249968	3911028	9300	45 dip / 020°	67.0 m	7.90 gpt	15m	38.6m	23.6 m
CJV-66	249133.2	3911441	13900	45 dip / 200°	126.0 m	3.06 gpt	30m	52m	22.0 m
					<i>including</i>	4.09 gpt	30m	42m	12.0 m
CJV-67	249968	3911028	9300	70 dip / 020°	117.3 m	1.46 gpt	21m	26m	5.0 m
						3.03 gpt	54m	63m	9.0 m
						3.13 gpt	77m	84m	7.0 m
CJV-68	248692	3911687	16500	45 dip / 200°	148.4 m	1.32 gpt	123m	126m	3.0 m
						2.66 gpt	130m	136m	6.0 m
CJV-69	249947	3910978	9300	60 dip / 020°	197.2 m	5.71 gpt	113m	134m	22.0 m
CJV-72	249947	3910978	9300	70 dip / 020°	223.6 m	1.95 gpt	120m	141m	21.0 m

*Note: Assay cut-off for the above table was at 0.5 gpt. There was no evidence of nugget effect and none were topcut. True widths for the intervals above have yet to be determined.*

During 2006 the Company has so far tested the Dachang Main Zone along a 2,520 strike length with multiple drill holes on 120m spaced cross sections to a depth of approximately 150 metres. This work is showing similar widths of sulphide mineralization to the surface trenching. On cross section, drill holes typically test the fault zone at 40m vertical intervals. An illustration of a typical cross section (Section 9300) can be found on the Company's website.

Results from three other drill holes from the North River District at Dachang have also been received, and did not show any significant gold values.

#### Methodology:

**Drill core samples** were taken at geologically significant intervals, typically over one metre. Core recovery was in excess of 90%. The designated sample intervals were cut with a diamond saw by qualified technicians. One half of the cut core was selected for assay with the remaining half being placed back into the core box. Care was taken to ensure that neither half of the core represents a bias with respect to the nature and mineral content of the sample. The sample interval and methodology are consistent with industry standards. Drill core samples were shipped to SGS Geochemical Laboratories

("SGS") located in Kunming and Tianjin, China for sample preparation and 50g fire assay with AA finish. SGS is the world's leading inspection, verification, testing and certification company. Analytical work is performed in accordance with recognized standards such as ASTM, ISO, JIS, and other accepted industry standards. Accuracy of the results is tested through the systematic inclusion of certified reference standards, blanks and duplicate samples.

**Security of Samples:** All of the samples collected at Dachang are stored in a restricted secure storage area. Samples are shipped by truck to Golmud and delivered to Inter-Citic's courier agent in Golmud for shipment to the various laboratories for analysis. Inter-Citic's courier agents are present at all transshipment point between Golmud and the laboratories. All the laboratories used by Inter-Citic are ISO approved and subject to the security protocols of that designation. Exploration at Dachang was conducted with the assistance of the numerous professionals from QGSI, working in co-operation with Inter-Citic's technical team on site and supervised by Mr. Garth Pierce, Vice-President of Exploration.

Mr. B. Terrence Hennessey, P.Geo, of Micon International Limited is a Qualified Person under the requirements of National Instrument 43-101 and has reviewed a copy of this press release.

**On Behalf of the Board:**

**"James J. Moore"**  
**President & CEO**

**ABOUT INTER-CITIC:**

Toronto-based Inter-Citic Minerals Inc. is an exploration and development company with properties in the People's Republic of China. The Company has strategic partnerships with several large financially strong and established groups in China to facilitate investment in China for both Western and Chinese partners. Inter-Citic is listed on the TSX under the symbol ICI. Inter-Citic's website is [www.inter-citic.com](http://www.inter-citic.com).
